Objective

B.Tech graduate and Backend Developer specializing in scalable applications, AI-powered solutions, robust APIs, and high performance backend systems.

Technical Summary

- **Programming Language:** Python, JavaScript, TypeScript, Java
- **Frontend:** Tailwind CSS, Next.js, React.js, React native
- **Backend:** Node.js, Express.js, FastAPI, Spring Boot(Basic)
- **Database:** MongoDB, Redis, PostgreSQL(basic)
- **Version Control:** Git, GitHub
- **Development Tools:** Postman, Git, Docker, Linux, Selenium, BeautifulSoup
- **AI:** LLM Applications, RAG, Prompt Engineering, LangChain

Experience

Ridemap (ridemap.in)

Software Engineer Intern

- Developed a real-time GeoFence notification system for live bus tracking, serving 20,000+ users.
- Migrated backend infrastructure from Firebase to Appwrite, improving scalability and maintainability.
- Built scalable real-time services with Node.js, Appwrite, and WebSockets for 20,000+ concurrent users.
- Enhanced API and authentication security by identifying vulnerabilities and implementing security improvements.

Education

Manakula Vinayagar Institute of Technology, Puducherry
Government Higher Secondary School, Thirunallar
Cauvery Public School, Neravy

B.Tech in AI & ML, July 2026

HSC, July 2022

SSLC, July 2020

Projects

PrintA4 (printa4.in)

- Architected and developed the complete backend infrastructure for a web-based print management platform, enabling seamless print order processing, secure online payments through Razorpay, and efficient workflow automation. Implemented robust API security, authentication, and reliable job queue mechanisms to ensure secure and consistent print operations. Tech Stack: JS, Appwrite, Razorpay, React.js.

JSIP - (Patent management portal)

- Designed and developed a cross-platform patent management system featuring a desktop application built with Tauri and a web portal for streamlined patent submission and tracking. Implemented an offline-first architecture using SQLite for local data storage, with automatic synchronization to Appwrite whenever an internet connection becomes available. Developed secure backend workflows, data synchronization mechanisms, and an intuitive web interface to ensure reliable access and seamless management of patent records across platforms. Tech Stack: Rust, SQLite, Appwrite, React.js

Certification

- Application Development Using NodeJS - UDEMY
- AI Fluency: Framework & Foundations - ANTHROPIC
